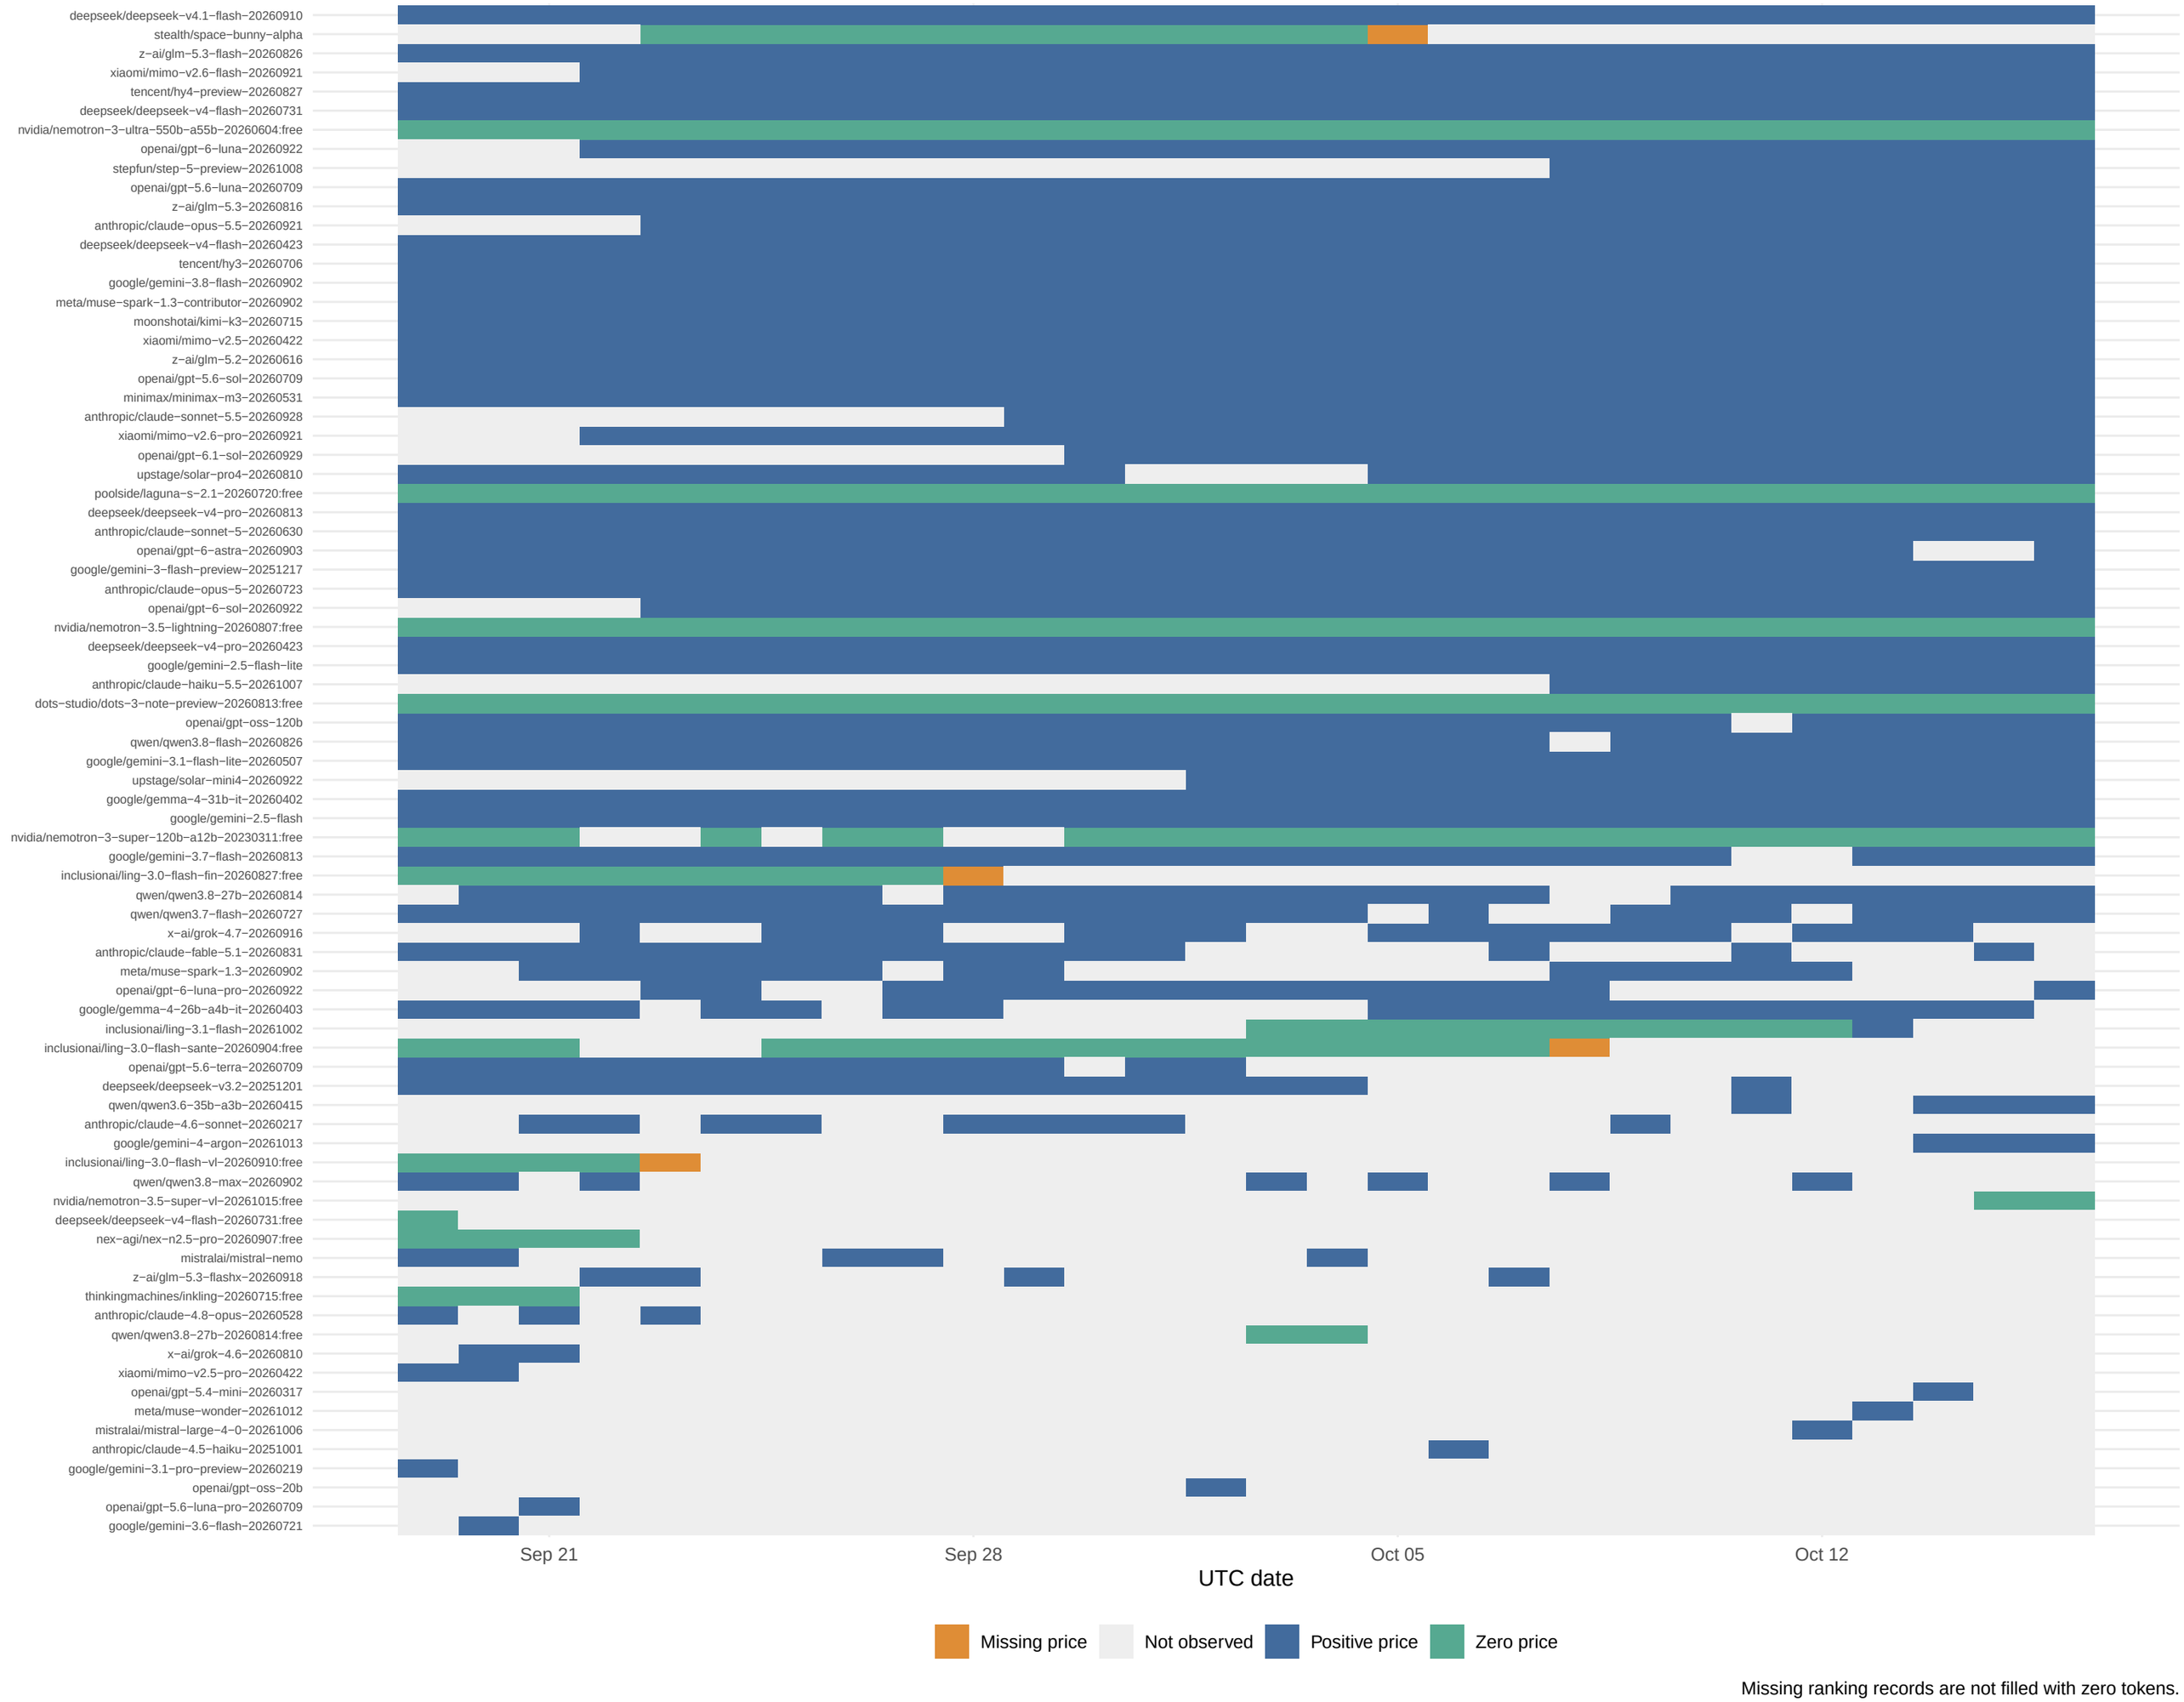
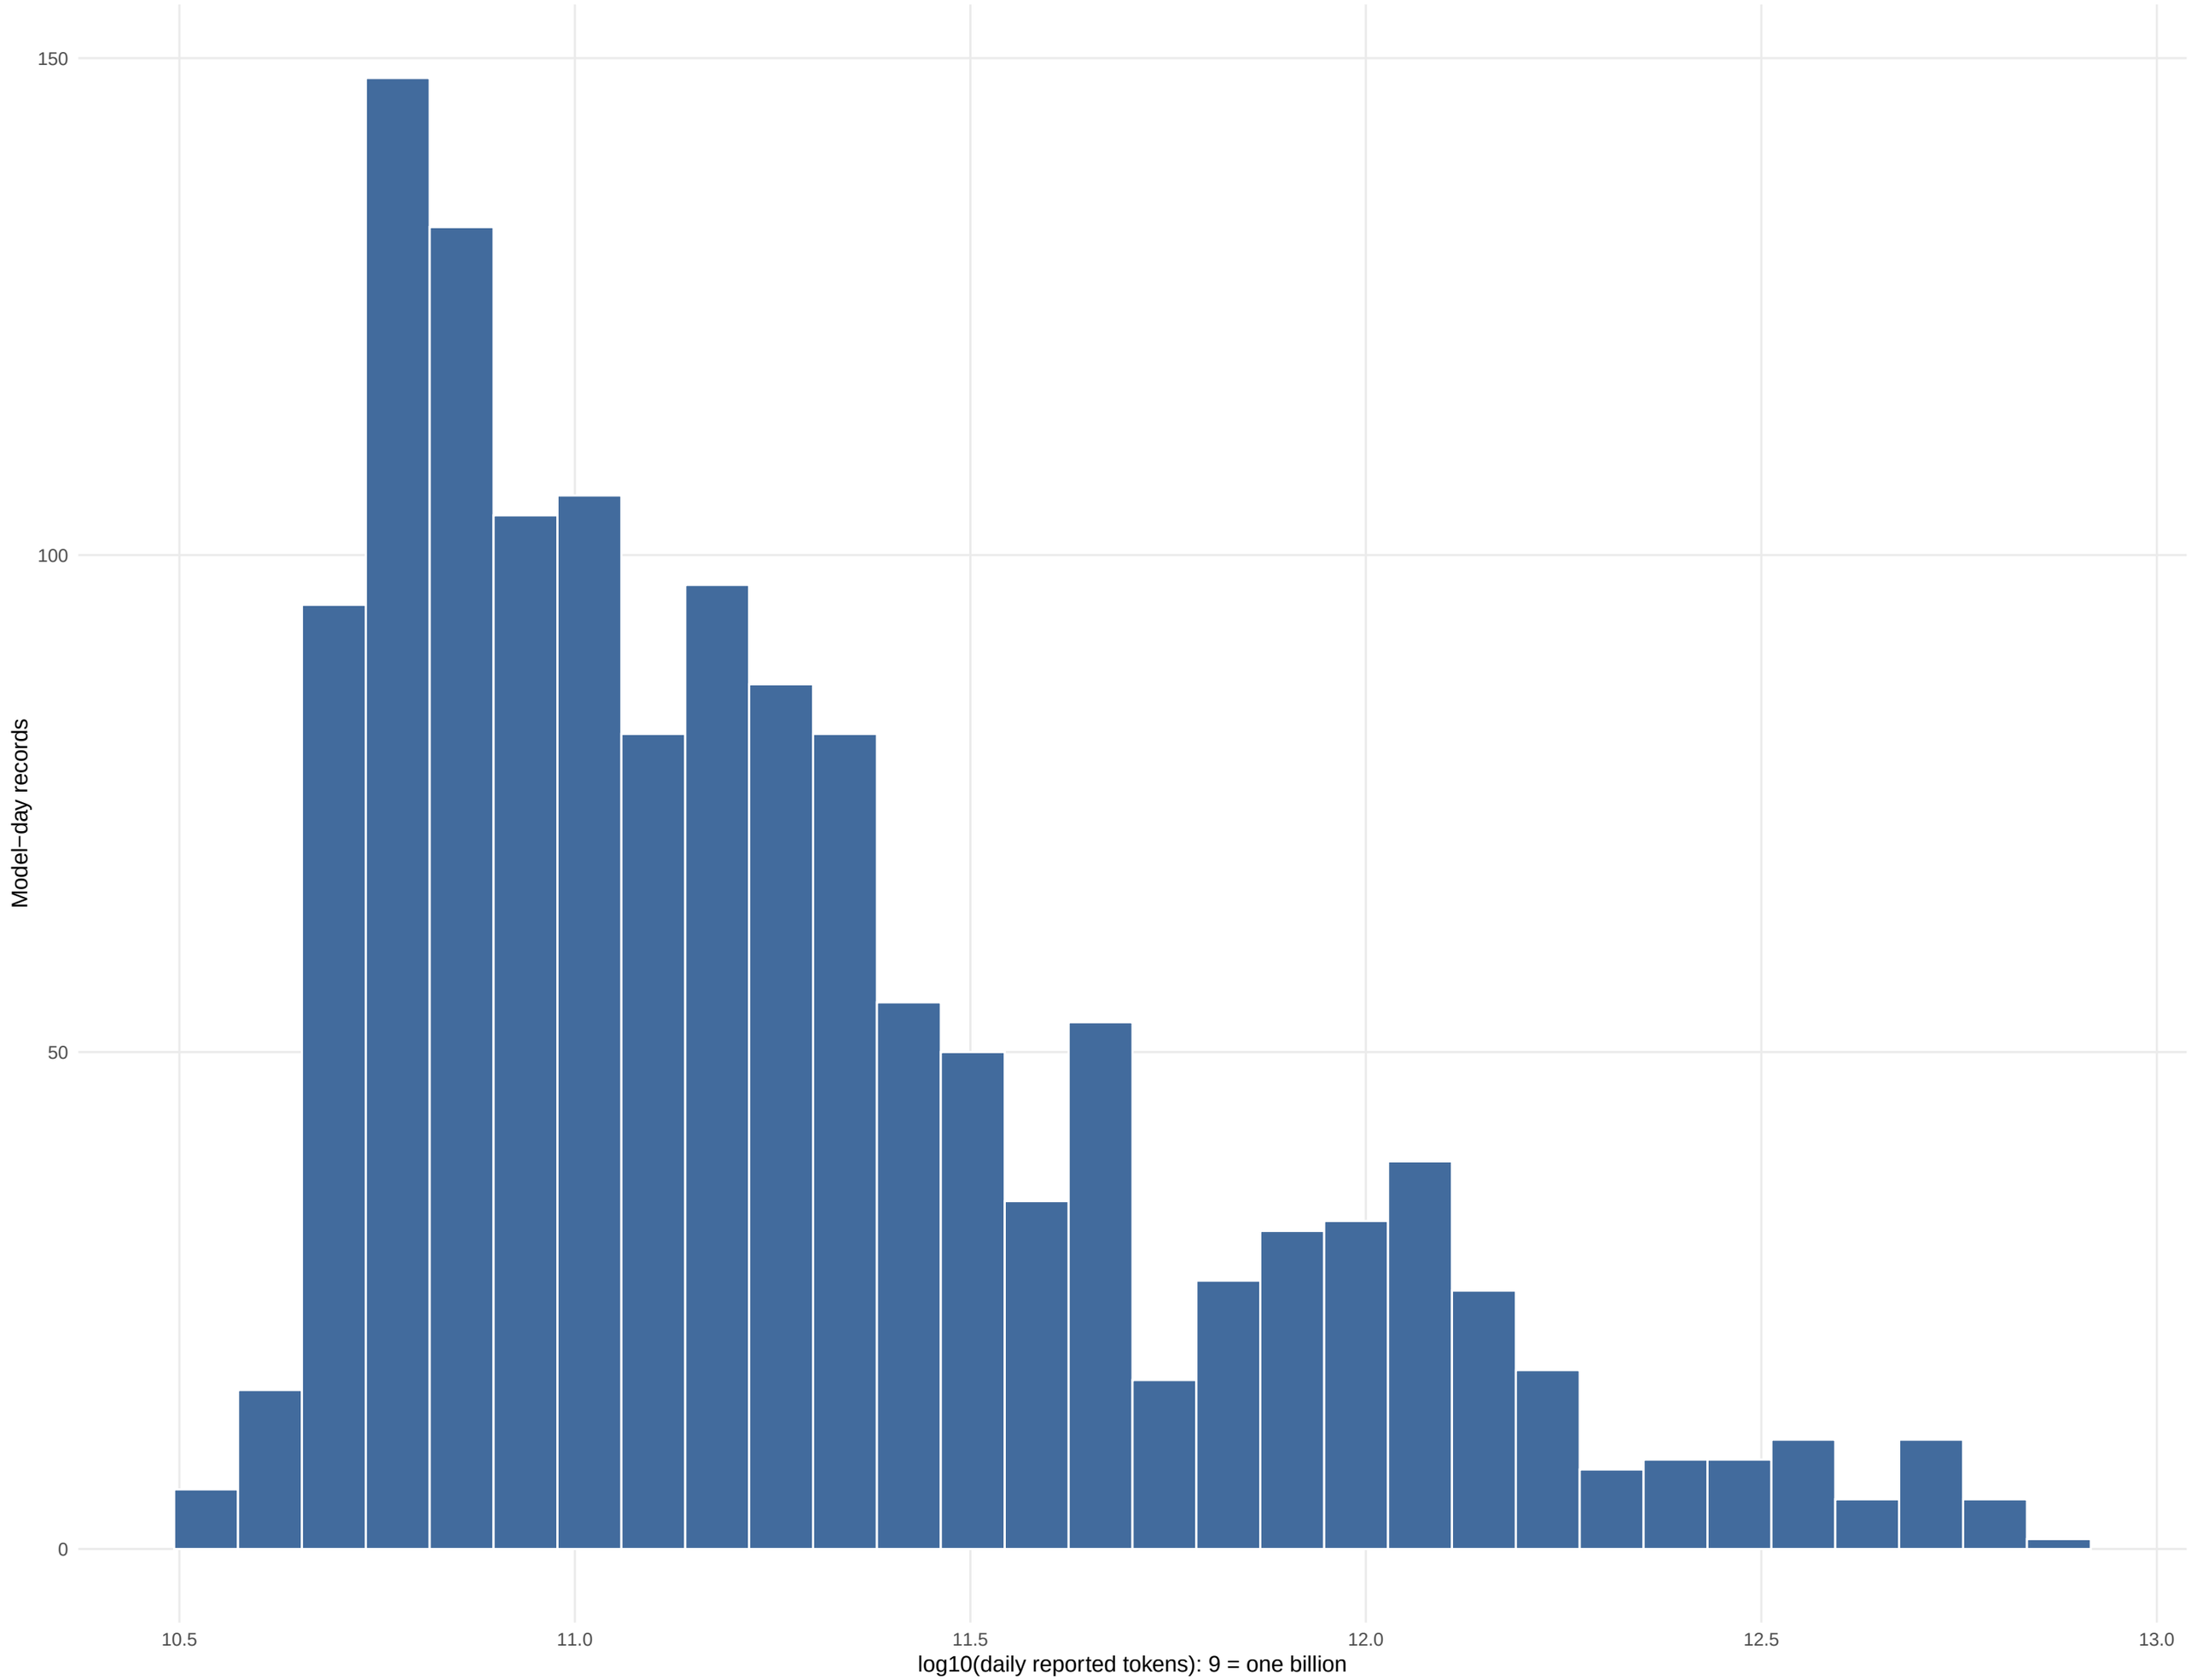
Which model−days are actually observed?



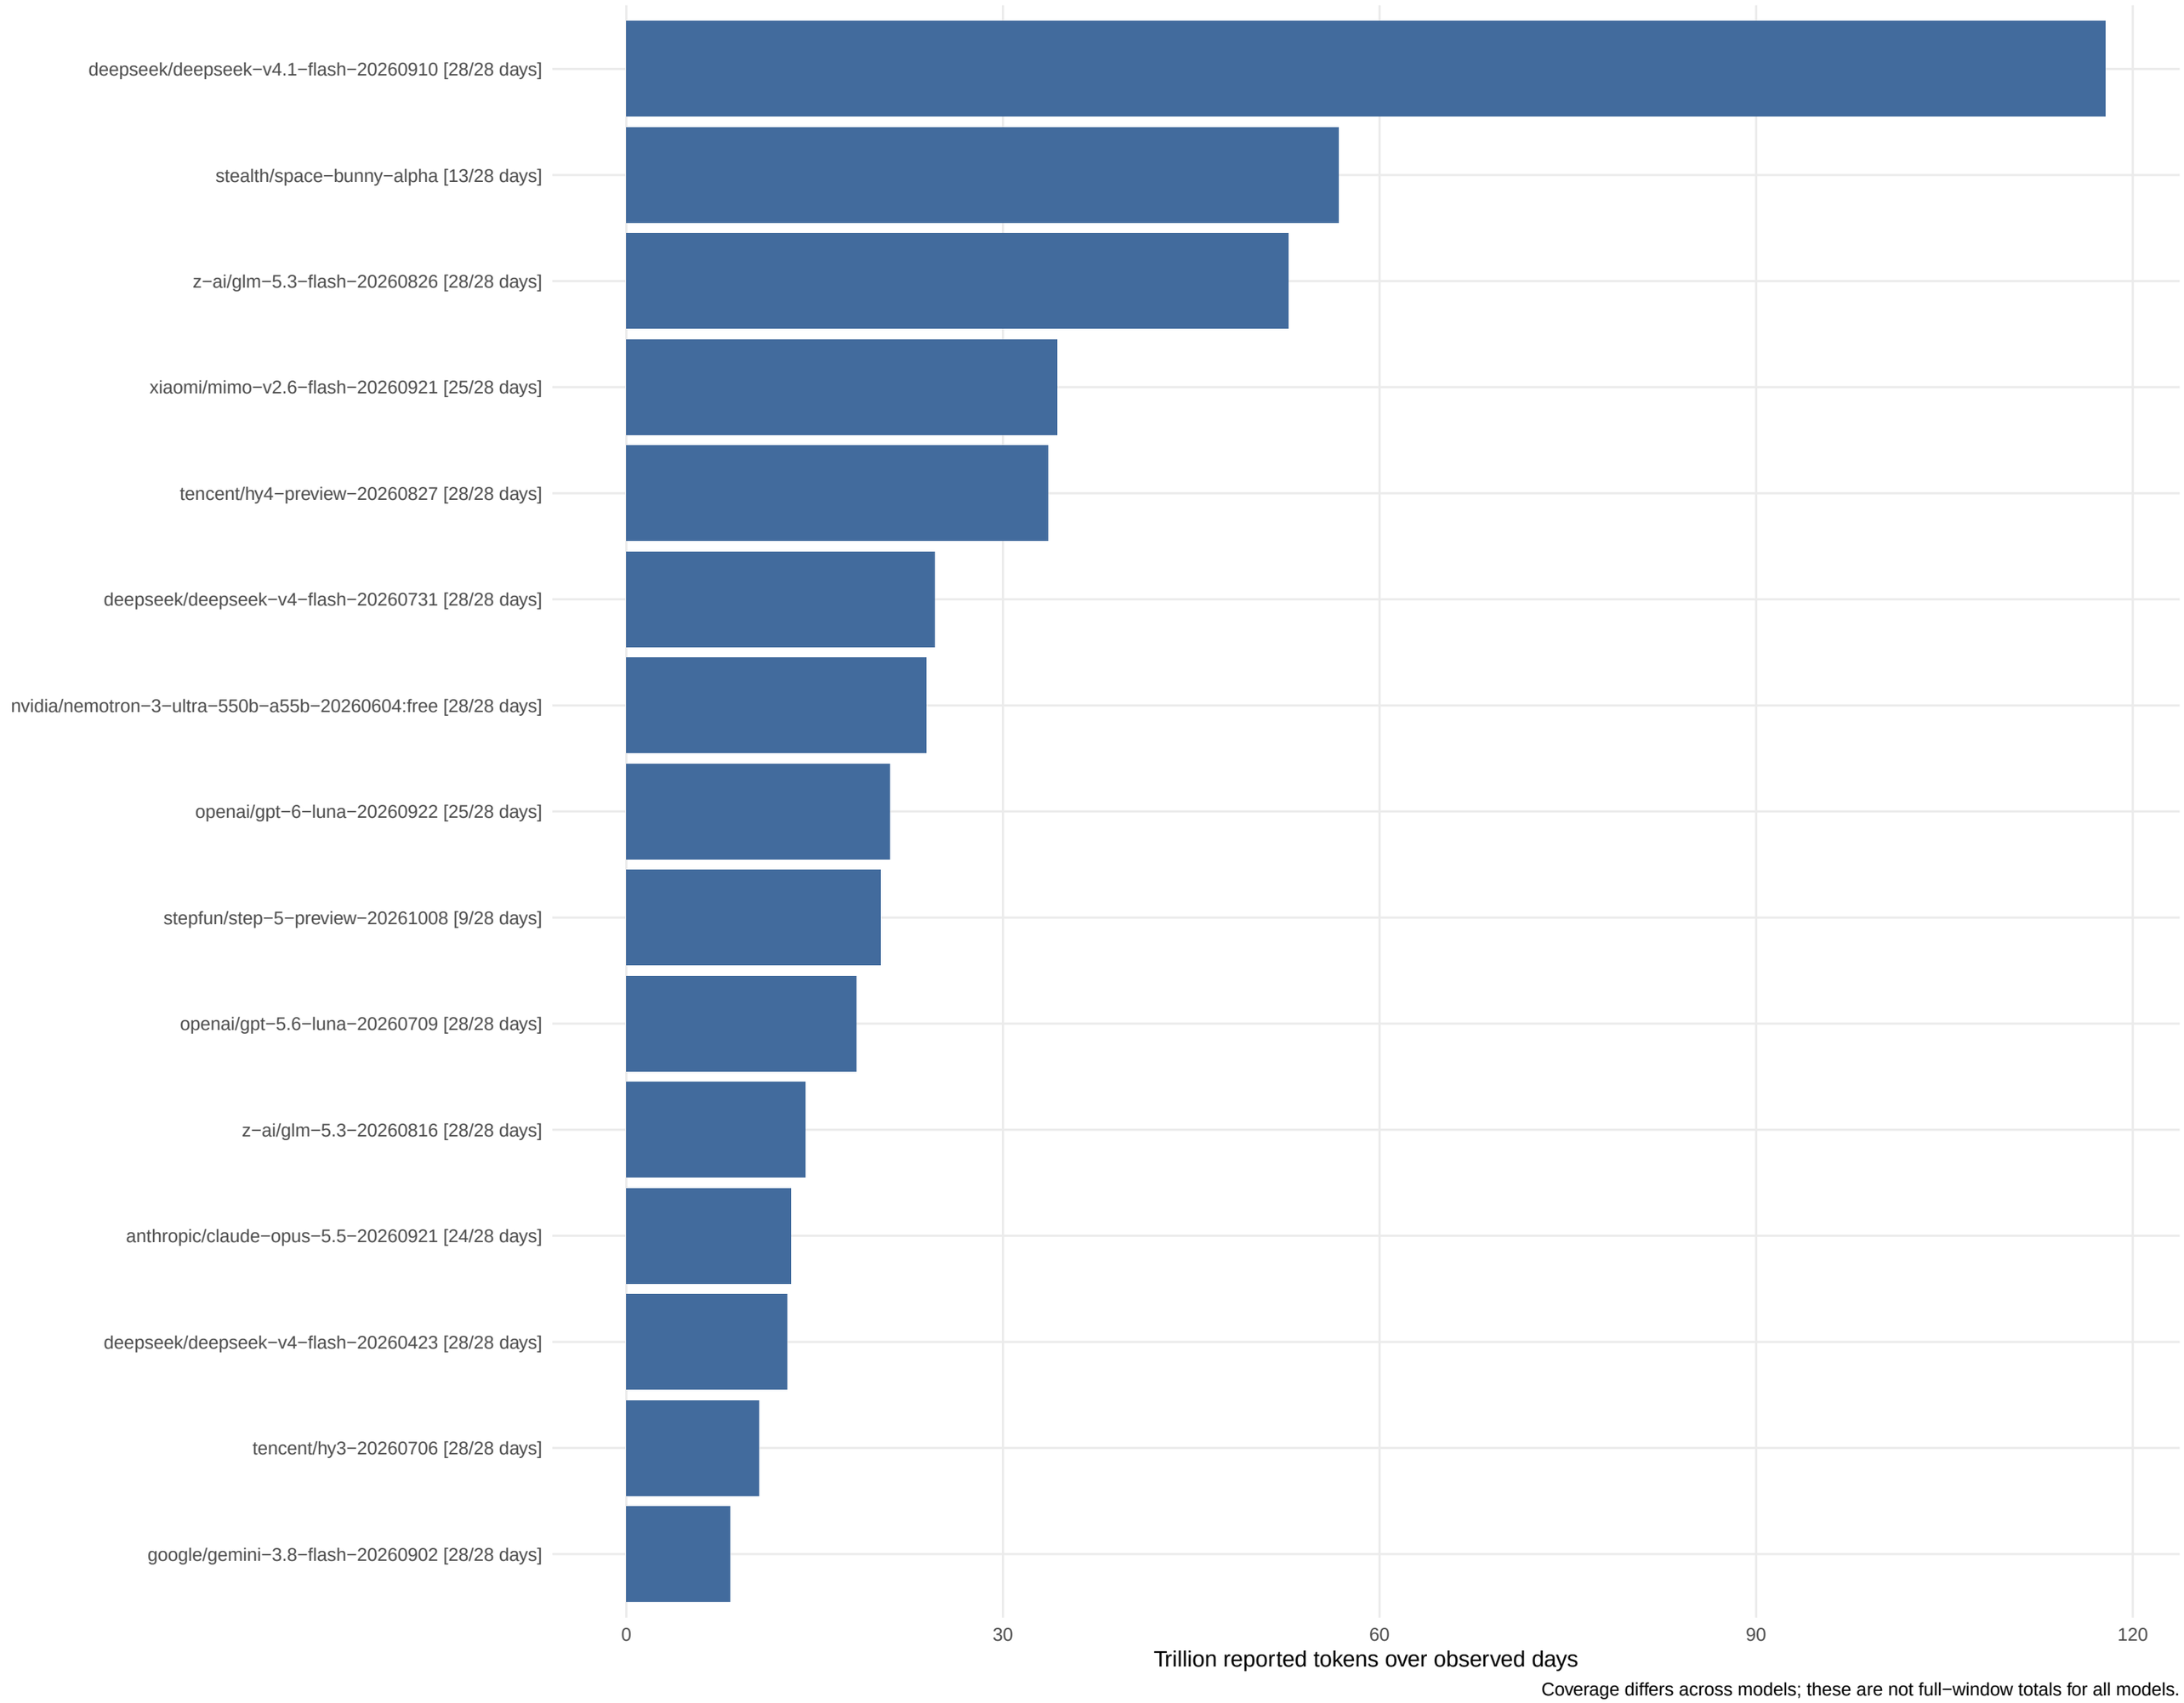
Missing ranking records are not filled with zero tokens.

How different are observed model−day workloads?



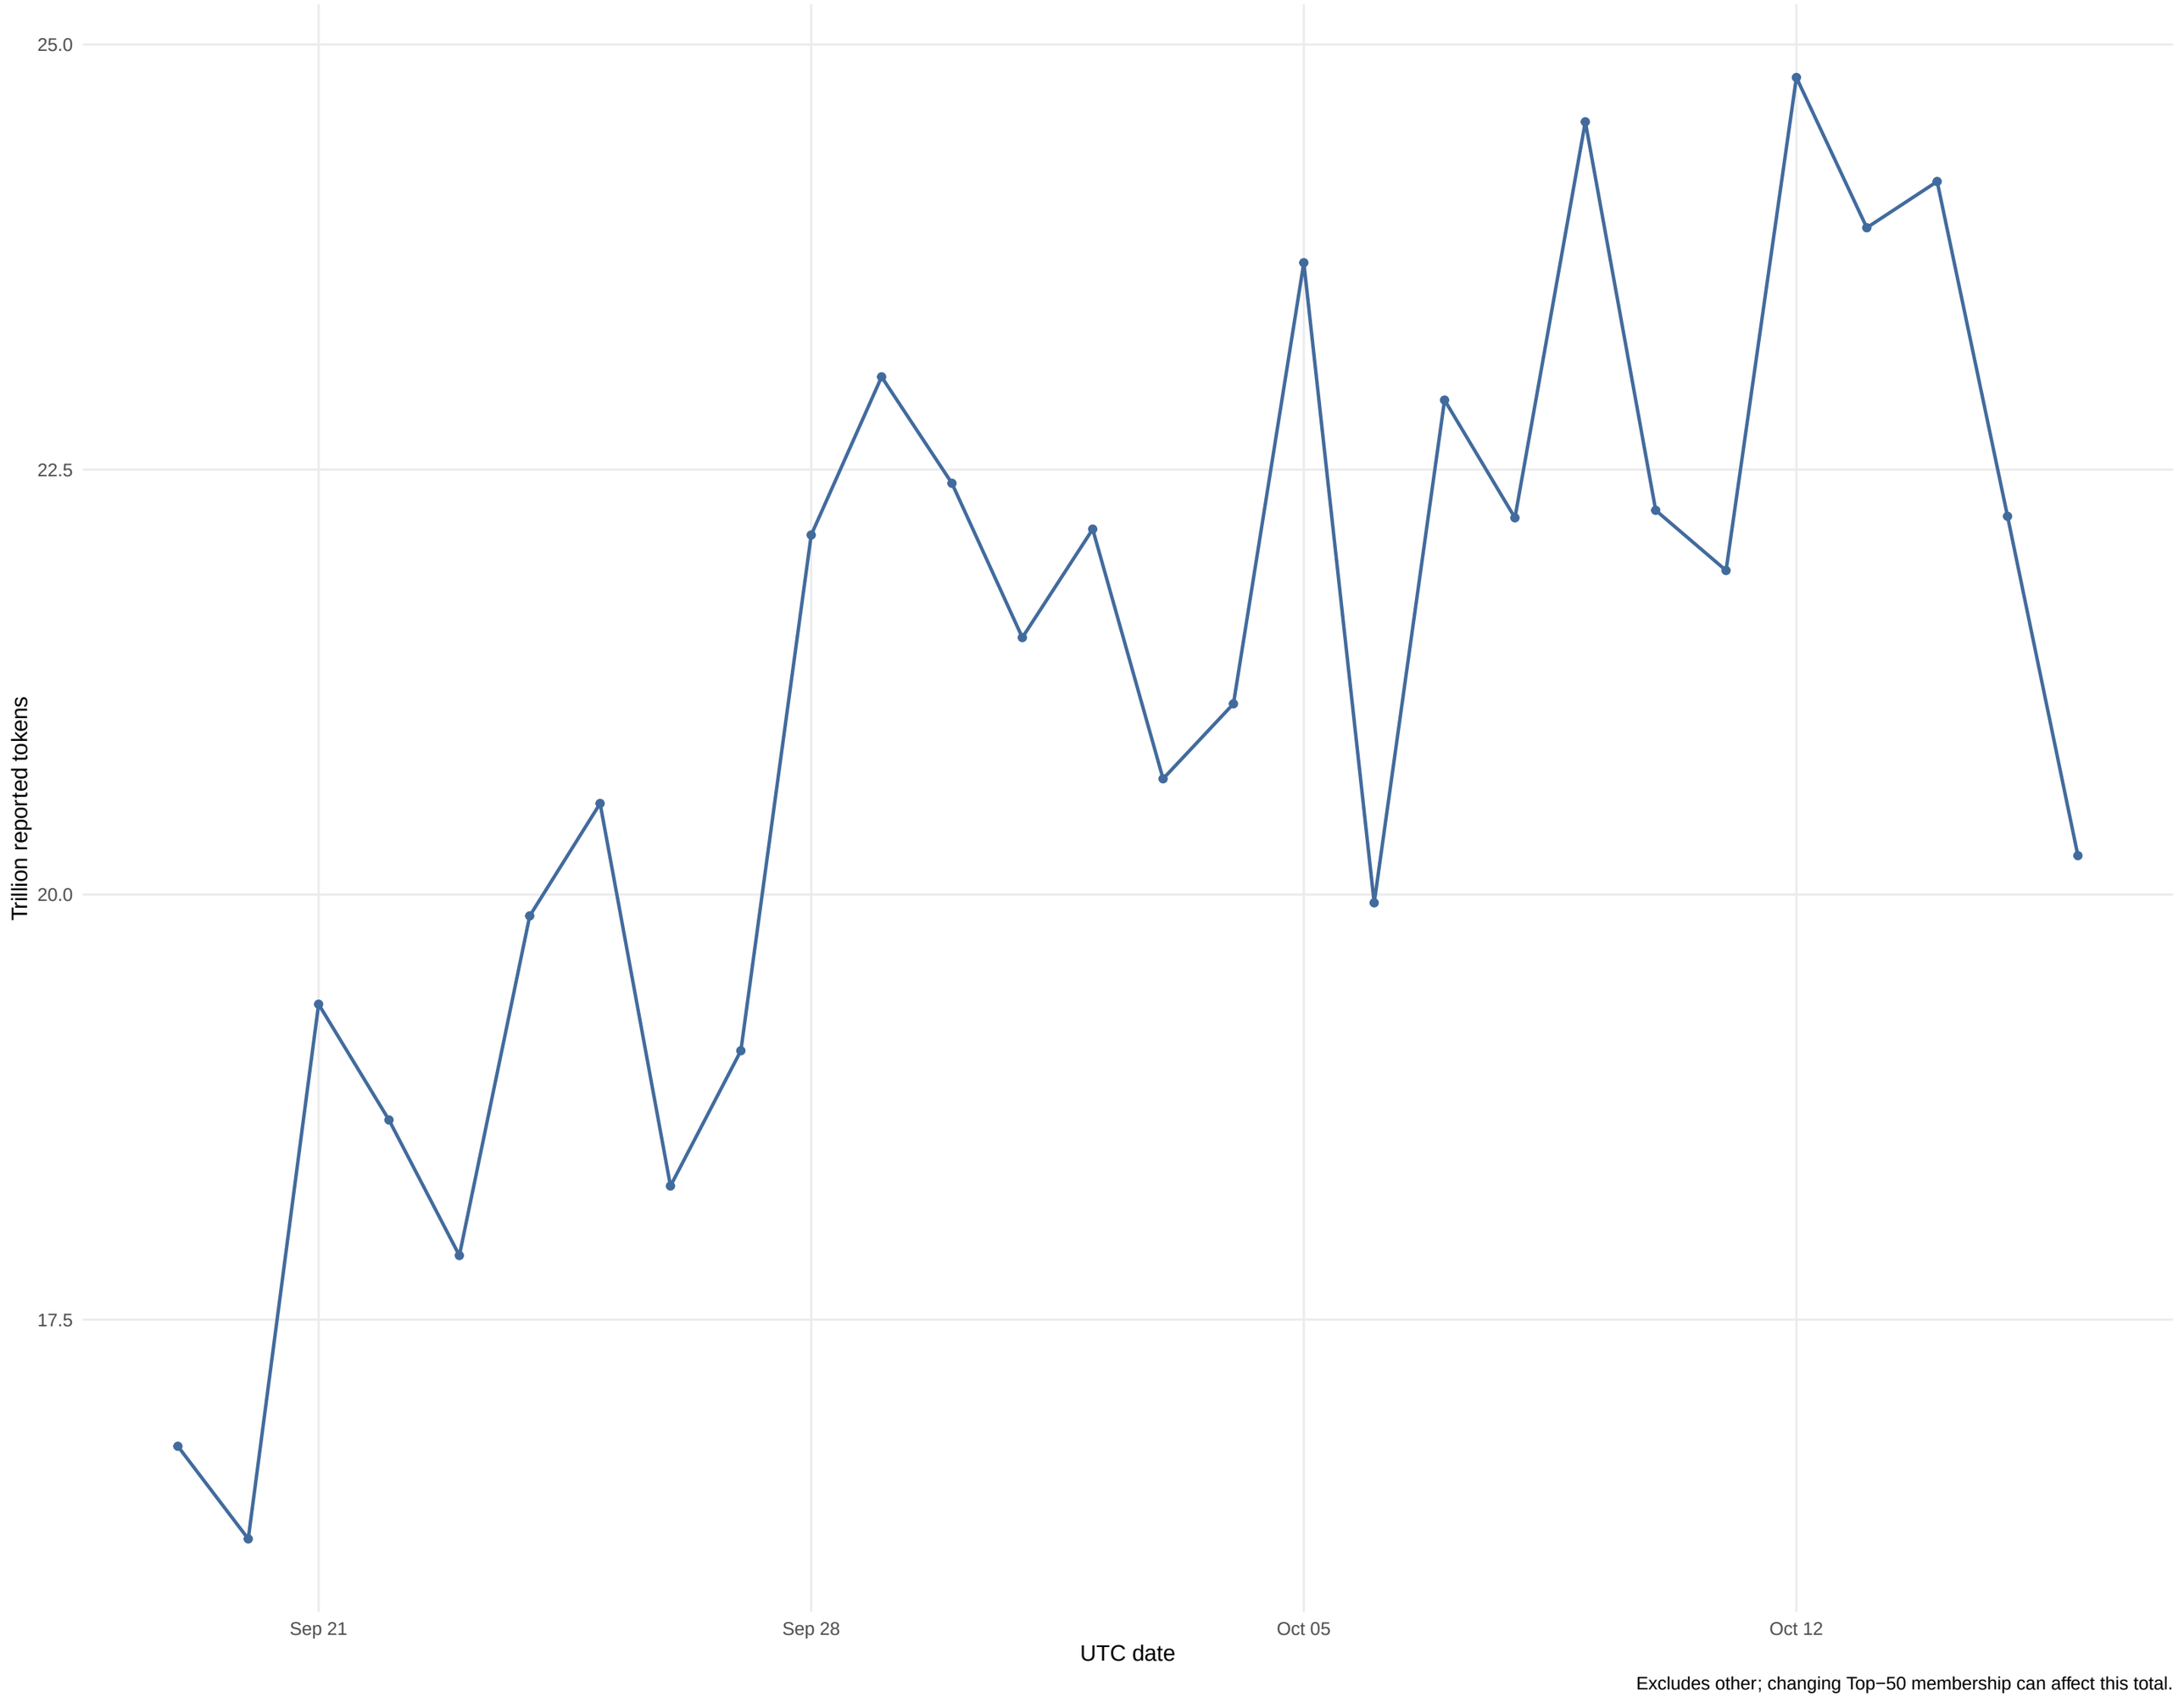
Only models visible in each daily Top 50 are included.

Largest visible cumulative token volumes



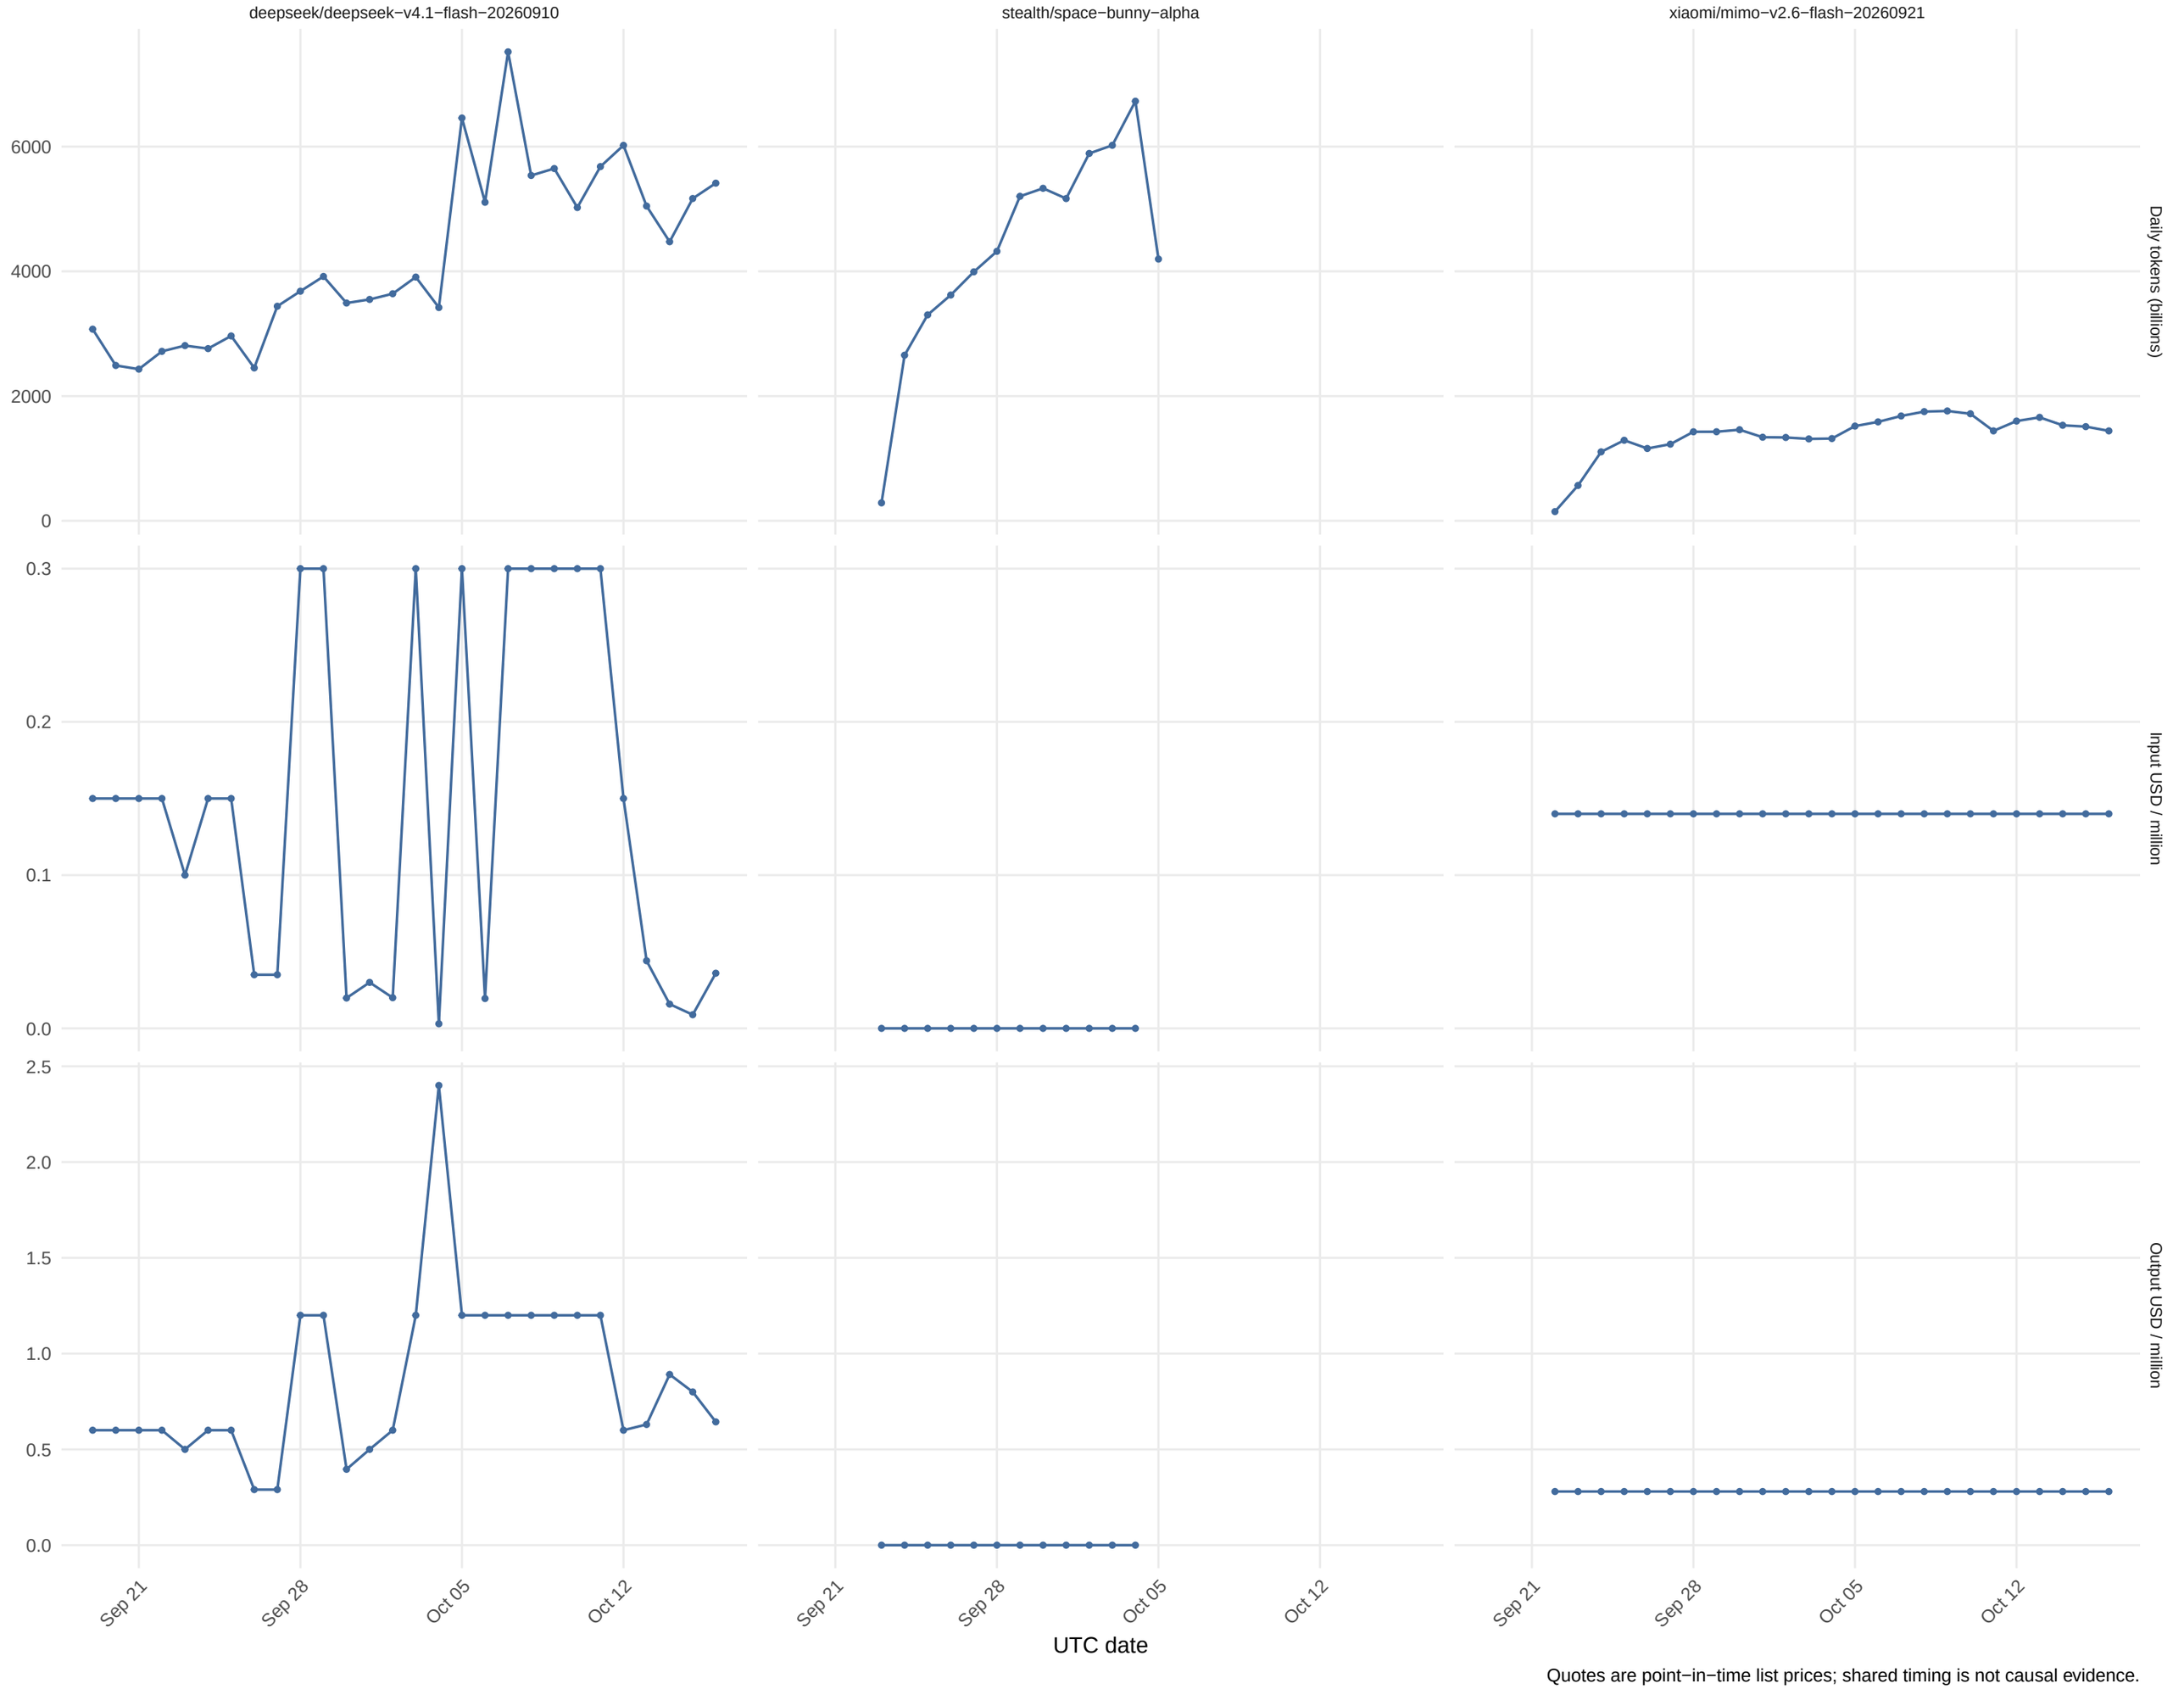
Coverage differs across models; these are not full−window totals for all models.

Daily traffic in the visible Top 50



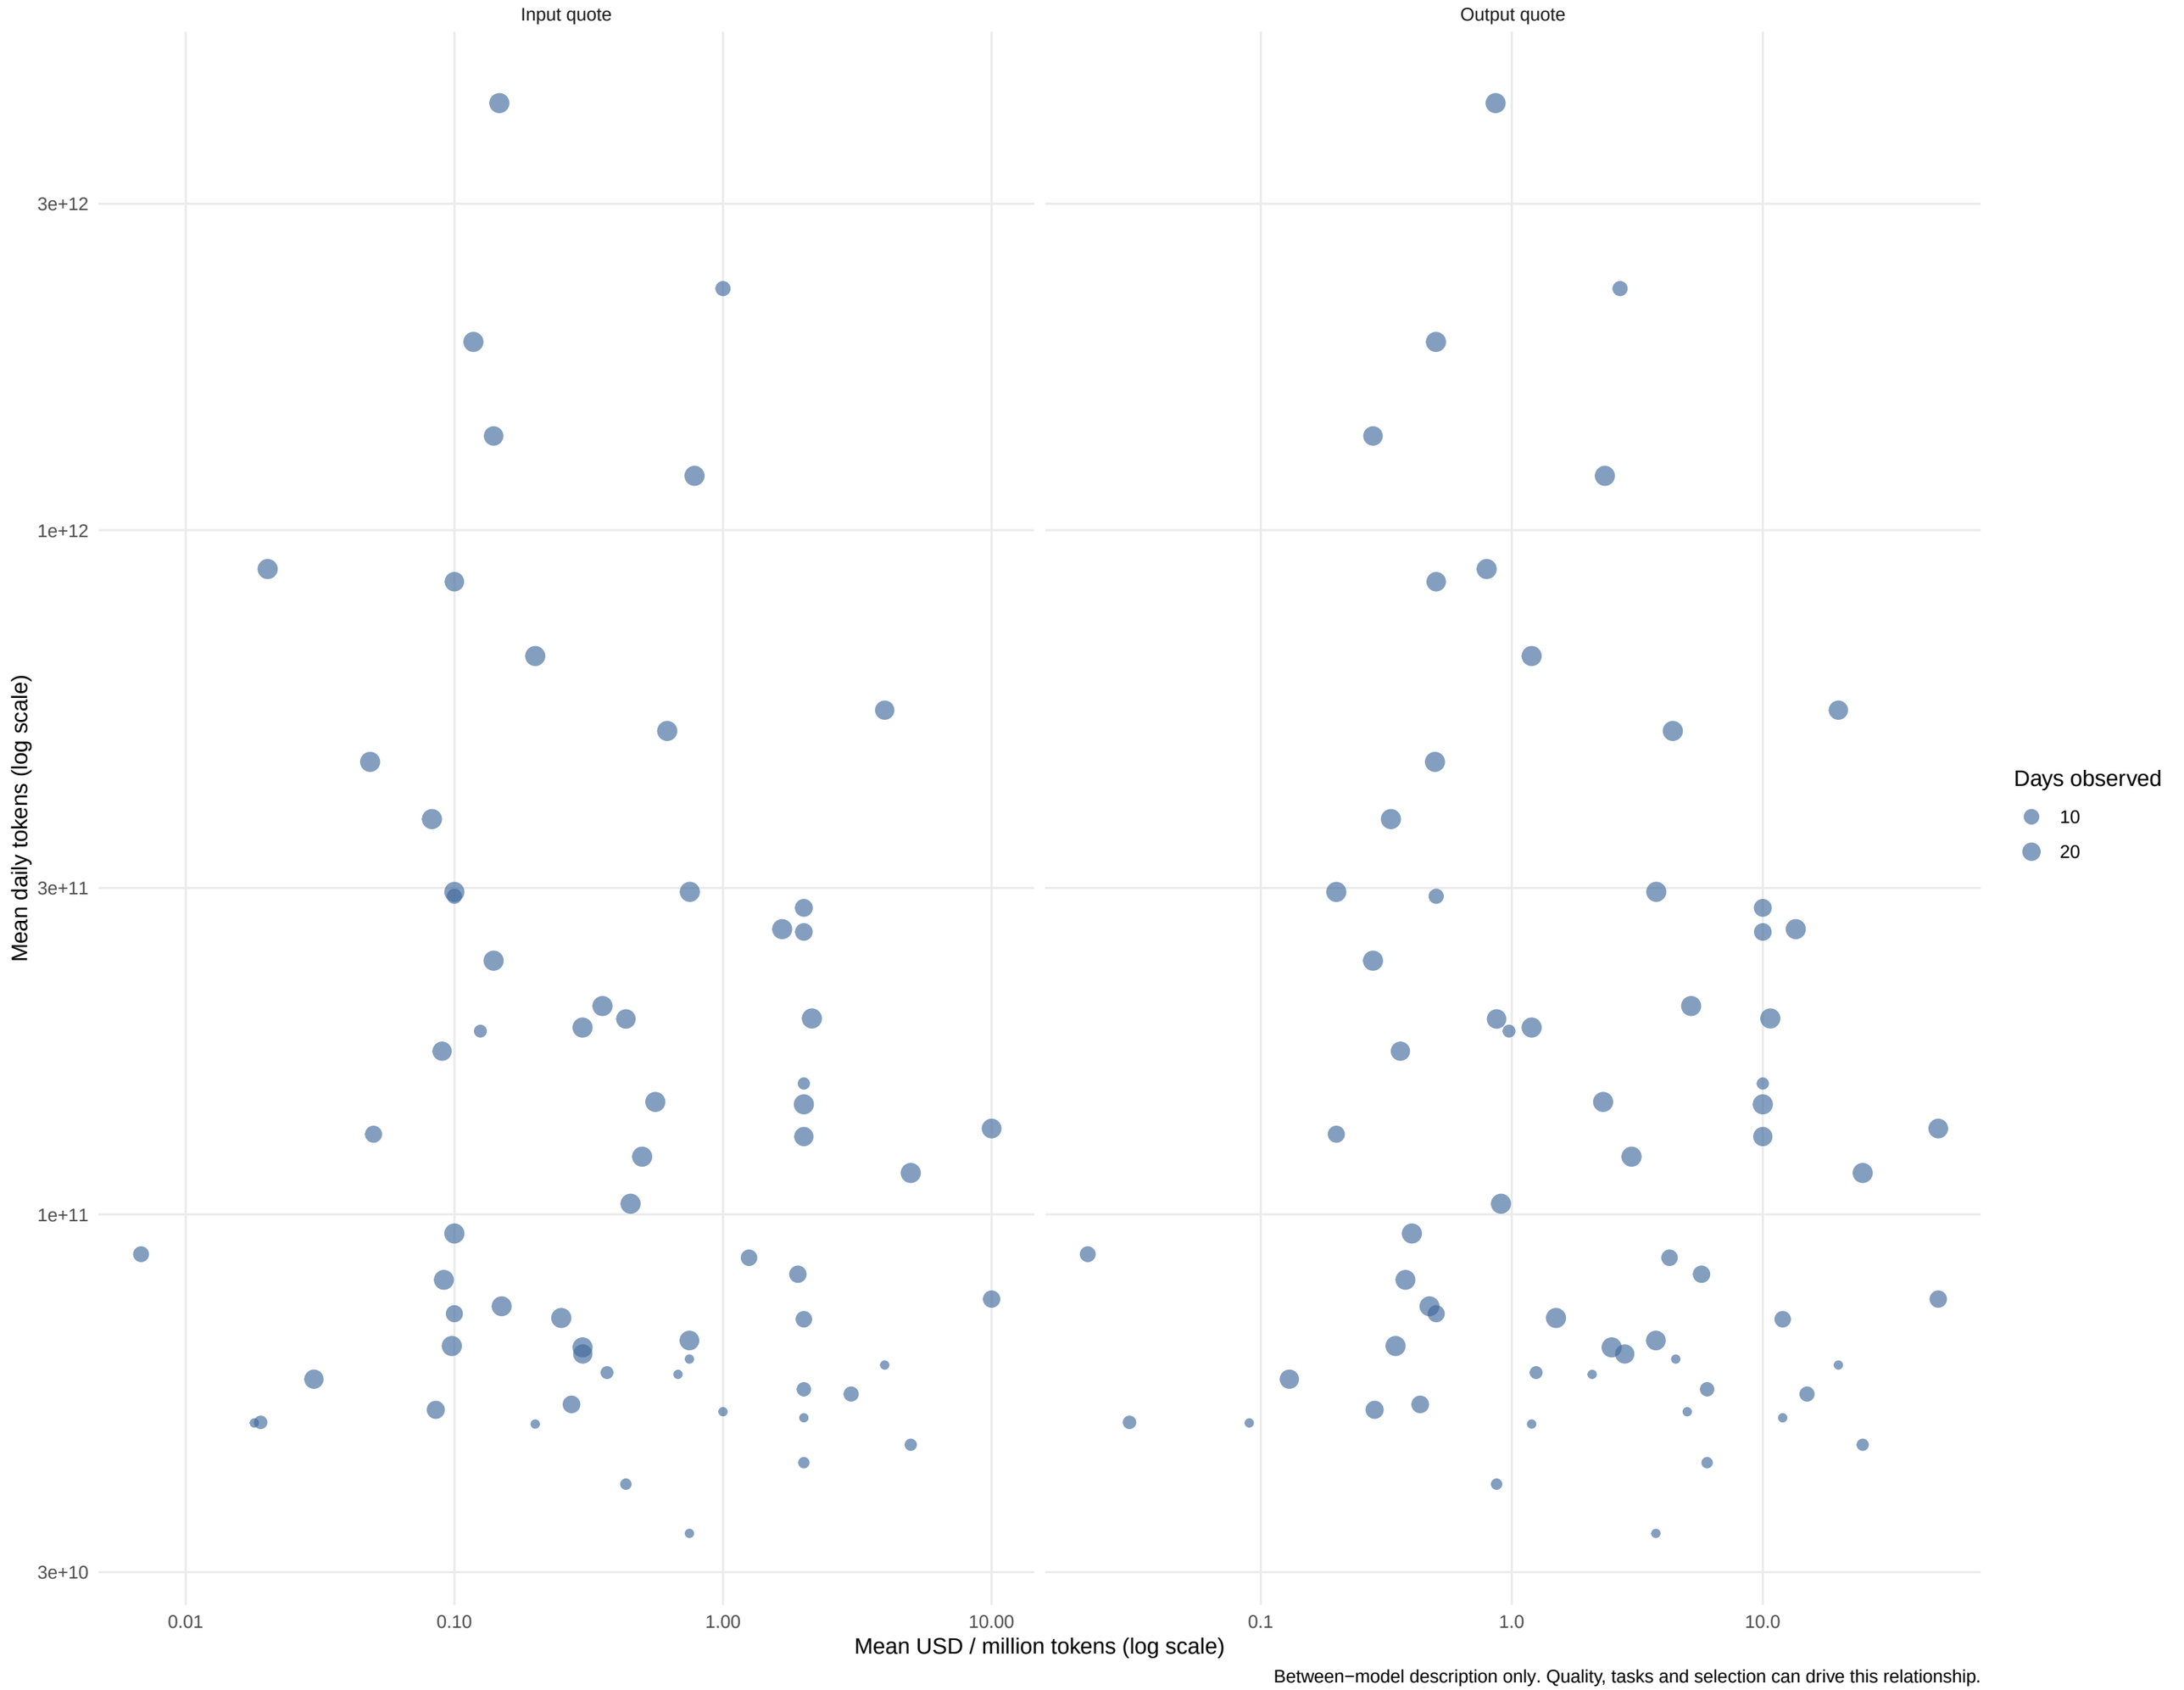
Excludes other; changing Top−50 membership can affect this total.

Usage and quotes for selected descriptive examples



Quotes are point−in−time list prices; shared timing is not causal evidence.

Do higher−priced models have different average usage?



Between−model description only. Quality, tasks and selection can drive this relationship.

Shares within the visible Top 50

Denominator excludes other. Missing model−days remain missing; panel y−scales differ.
